COMPANY ADDRESS

Job Application for Software Engineer

Dear Mr./Ms./Dr. LastName,

About Me

I am writing you in regard to COMPANY NAME's POSITION. As a developer who is passionate about user centered design and crafting a seamless experience, I found this position to be an excellent match. I have over seven years of experience developing frontend specific as well as full stack solutions. I have worked on applications ranging from C++ QT interfaces for distributed camera systems, to Vuejs progressive web applications, to full stack Blazor Dotnet.

Why COMPANY NAME?

My experience at Thetacore included designing and prototyping user interfaces, testing and debugging, building a test suite, and creating graphical visualization for product needs. I learned how to be productive when working on a small remote team. I also learned many best practices when it comes to architecting a distributed SAS Application. I believe that my experience fits well with COMPANY and I would leverage my expertise well.

Why Me?

I have a broad range of skills. My experience with Human Factors and Cognition gave me an understanding and appreciation for elegant design. I have designed and implemented applications myself as well as worked with designers. Additionally, I have used many application development technologies so I find it easier to learn and adapt to new ones.

Sincerely,

Bradley Schwarz
